**ATTACHMENT 1 TO ADDENDUM NO. 1**  
**QUESTIONS AND ANSWERS**

1. **Question:** What type of spoil is this, shell rock, sand or marle?

**Answer:** The composition of this spoil may include brown sand, organic, trace of silt, rock and shell. Potential bidders are encouraged to perform their own analysis to determine the exact content of the spoil. Samples of the spoil may be taken on Thursday, April 6, 2006 from 9:00 AM – 3:00 PM during the scheduled site access.

2. **Question:** Was this fill provided by the Army Corps of Engineers (ACOE)? Was it dug up from the C-43 canal?

**Answer:** The District, as local sponsor for the Central and Southern Florida Flood Control Project, acquired this parcel for use by the ACOE as a spoil disposal area for material dredged from the C-43 project. However, we have no specific information that the earthen material now located on the property came from C-43.

3. **Question:** How did the District acquire the spoil?

**Answer:** To the best of our knowledge this spoil was deposited during ACOE dredging operations though the exact dates are unknown.
